question

If a view named V1 is created in such a way that it references every column in a table named EMPLOYEE except a column named SALARY, which of the following is **not** a statement?

Select one or more:

- a. All data, except SALARY data that is stored in the EMPLOYEE table is copied to a seperate physical location when V1 is created
- b. View V1 can be used in the same context as the EMPLOYEE table for all data retrieval operations that do not acquire SALARY information
- c. View V1 cannot be used as a data source for other views
- d. No data is copied to a seperate physical location when V1 is created
- e. View V1 can be used as a data source for other views

A view does not necessarily exist in a physical form

Database views are created using the CREATE VIEW statement. Views can be created from a single table, multiple tables or another view.

Given the following statements:

```
CREATE TABLE tbl (col1 INTEGER, col2 CHAR(5));
CREATE TABLE tblAudit (user VARCHAR(20), date DATE, action VARCHAR(20));
CREATE TRIGGER trig_tblAudit ON tbl INSTEAD OF INSERT AS
BEGIN
INSERT INTO tblAudit VALUES (CURRENT USER, CURRENT DATE,'Insert');
END
```

If user USER1 executes the following statements:

```
INSERT INTO tbl VALUES (1, 'abc');
INSERT INTO tbl (col1) VALUES (2);
UPDATE tbl SET col2 = 'Hacked' WHERE col1 = 1;
```

How many new records will be written to the database tables?

Select one:

- a. 5
- b. 4
- c. 2
- d. 3
- e. 0

Which of the following is **not** an accurate statement about views?

Select one or more:

views can be used to access to columns in a database table.....

- [x] a. Views are publicly referenced names and no special authority or privilege is needed to use them.
- [ ] b. Views can be used to restrict access to columns in a base table that contain sensitive data
- [ ] c. Views can be used to store queries that multiple applications execute on a regular basis in a database
- [x] d. All views are updatable
- [ ] e. Views may degrade the performance of the database

All views are not updatable. So, UPDATE command is not applicable to all views. An updatable view is one which allows performing a UPDATE command on itself without affecting any other table

Procedures are compiled only once but they can be called many times as needed without being compiled each time

Each and every time functions are compiled they provide output according to the given input

use of stored procedures can reduce network traffic between clients and servers, because the commands are executed as a single batch of code. This means only the call to execute the procedure is sent over a network, instead of every single line of code being sent individually

Consider the following statements to create a view

Create view product_suppies (PID,Name,Supplier,TotalItems,TotPay)
as
select p.ProductID,p.ProductName,s.supplierName, Sum(sp.numItems), SUM(sp.numItems*sp.price)
from Product p, Supplier s, Supplies sp
where p.productID=sp.productID and sp.supplierID=s.supplierID
group by ProductID,ProductName,supplierName

Which of the following statements are true related to the above.

Select one or more:

- a. Renaming the columns in this view is not mandatory
- b. Any query written over Products, Suppliers or Supplies tables could be performed on this view
- c. This view is not updatable
- d. This view is helpful for stakeholders who only need to see information such as total pay and do not need to edit it.
- e. The query "select supplierName from product_suppies where TotalItems>100" will return the supplier Name of each suppli supplied more than a total of 100 items

Given the following statements:

CREATE TABLE tbl (col1 INTEGER, col2 CHAR(5));

CREATE TABLE tblAudit (user VARCHAR(20), date DATE, action VARCHAR(20));

CREATE TRIGGER trig_tblAudit ON tbl INSTEAD OF INSERT AS
BEGIN
INSERT INTO tblAudit VALUES (CURRENT USER, CURRENT DATE,'Insert');
END

If user USER1 executes the following statements:

INSERT INTO tbl VALUES (1, 'abc');
INSERT INTO tbl (col1) VALUES (2);
UPDATE tbl SET col2 = 'Hacked' WHERE col1 = 1;

How many new records will be written to the database tables?

Select one:

- a. 0
- b. 2
- c. 3
- d. 5
- e. 4

Consider the following procedure:

```
create procedure Swap(@x int out, @y int out)
as
begin
 declare @tmp int
 set @tmp = @x
 set @x = @y
 set @y = @tmp
 end

 declare @x1 int
 declare @y1 int
 set @x1 = 3
 set @y1 = 4
 exec swap @x1 out,@y1 out
 print @x1
 print @y1
```

To create a stored procedure with output parameter, we use the keywords OUT or OUTPUT

Select the correct statement related to the above code.

Select one:

- a. @x and @y are output parameters only
- b. @y is an input parameter and @x is an output parameter
- c. @x and @y are input parameters only
- d. Both @x and @y are input and output parameters
- e. @x is an input parameter and @y is an output parameter

- e. MS-SQL

Which statement/s would be **correct** with regards to SQL-stored procedure

Select one or more:

- [x] a. Procedure can have zero or more output parameters
- [x] b. Procedures can have input/output parameters
- [x] c. Inside procedures data retrievels (e.g. Select) and data manupilations (e.g. insert) could be performed
- [ ] d. Procedure can have only input parameters
- [ ] e. None of the given answers

Consider the following procedure:

```
create procedure Swap(@x int out, @y int out)
as
begin
 declare @tmp int
 set @tmp = @x
set @x = @y
set @y = @tmp
 end

declare @x1 int
declare @y1 int
set @x1 = 3
set @y1 = 4
exec swap @x1 out,@y1 out
print @x1
print @y1
```

XXX

Select the correct statement related to the above code.

Select one:

a. @x is an input parameter and @y is an output parameter

b. @x and @y are input parameters only

c. @y is an input parameter and @x is an output parameter

d. Both @x and @y are input and output parameters

Given the following statements:

```
CREATE TABLE tbl (col1 INTEGER, col2 CHAR(5));
CREATE TABLE tblAudit (user VARCHAR(20), date DATE, action VARCHAR(20));
CREATE TRIGGER trig_tblAudit ON tbl FOR INSERT AS
BEGIN
INSERT INTO tblAudit VALUES (CURRENT USER, CURRENT DATE,'Insert');
END
```

If user USER1 executes the following statements:

```
INSERT INTO tbl VALUES (1, 'abc');
INSERT INTO tbl (col1) VALUES (2);
UPDATE tbl SET col2 = 'Hacked' WHERE col1 = 1;
```

How many new records will be written to the database tables?

Select one:

- a. 4
- b. 5
- c. 0
- d. 3
- e. 2

wered

estion

Which of the following is **not** an accurate statement about views?

Select one or more:

- [ ] a. Views can be used to restrict access to columns in a base table that contain sensitive data
- [ ] b. Views can be used to store queries that multiple applications execute on a regular basis in a database
- [ ] c. Views may degrade the performance of the database
- [x] d. Views are publicly referenced names and no special authority or privilege is needed to use them.
- [x] e. All views are updatable

Consider the following procedure:

```
create procedure Swap(@x int out, @y int out)
as
begin
 declare @tmp int
 set @tmp = @x
set @x = @y
set @y = @tmp
 end

 declare @x1 int
 declare @y1 int
 set @x1 = 3
 set @y1 = 4
 exec swap @x1 out,@y1 out
 print @x1
 print @y1
```

Select the correct statement related to the above code.

Select one:

- a. @x and @y are output parameters only.

```
as
begin
 declare @tmp int
 set @tmp = @x
set @x = @y
set @y = @tmp
 end

 declare @x1 int
 declare @y1 int
 set @x1 = 3
 set @y1 = 4
 exec swap @x1 out,@y1 out
 print @x1
 print @y1
```

Select the correct statement related to the above code.

Select one:

- a. @x and @y are output parameters only
- b. @y is an input parameter and @x is an output parameter
- c. @x and @y are input parameters only
- d. Both @x and @y are input and output parameters
- e. @x is an input parameter and @y is an output parameter

In which of the following scenarios would a stored procedure be beneficial?

Select one or more:

- [ ] a. An application running on a remote client needs to calculate and store an employee's salary which is obtained by multiplying the number of hours he has worked with the rate he is paid. Both the number of hours and rate are also stored in a table in the atabse.
- [x] b. An application running on a remote client needs to collect three input values, perform a calculation using the values provided, and store the input data, along with the results of the calculation in two different base tables
- [ ] c. An application running on a remote client needs to track every modification made to a table that contains sensitive data
- [ ] d. An application running on a remote client needs to ensure that every new employee that joins the company is assigned a unique, sequential employee number when his information is stored in the database.
- [ ] e. All of the given answers

question

If a view named V1 is created in such a way that it references every column in a table named EMPLOYEE except a column named SALARY, which of the following is **not** a statement?

Select one or more:

- [x] a. All data, except SALARY data that is stored in the EMPLOYEE table is copied to a seperate physical location when V1 is created
- [ ] b. View V1 can be used in the same context as the EMPLOYEE table for all data retrieval operations that do not acquire SALARY information
- [ ] c. View V1 cannot be used as a data source for other views
- [ ] d. No data is copied to a seperate physical location when V1 is created
- [x] e. View V1 can be used as a data source for other views

Consider the following statements to create a view

```
Create view product_suppies (PID,Name,Supplier,TotalItems,TotPay)
as
select p.ProductID,p.ProductName,s.supplierName, Sum(sp.numItems), SUM(sp.numItems*sp.price)
from Product p, Supplier s, Supplies sp
where p.productID=sp.productID and sp.supplierID=s.supplierID
group by ProductID,ProductName,supplierName
```

Which of the following statements are true related to the above.

Select one or more:

- a. Renaming the columns in this view is not mandatory
- b. Any query written over Products, Suppliers or Supplies tables could be performed on this view
- c. This view is helpful for stakeholders who only need to see information such as total pay and do not need to edit it.
- d. This view is not updatable
- e. The query "select supplierName from product_suppies where TotalItems>100" will return the supplier Name of each supplier who had supplied more than a total of 100 items

question

Which of the following statements are true ?

Select one or more:

- [x] a. variables declared could be used in where clause only
- [ ] b. "declare @ID int,@sum int" is a valid T-SQL statement
- [ ] c. Consider the following T-SQL statements:

```
declare @cnt int
set @cnt=100
if (@cnt>75)
print 'inside the if statement'
print 'count is greater than 75'
```

The output for the above code is as follows :
inside the if statement
count is greater than 75

- [x] d. Consider the following T-SQL statements

```
declare @cnt int
set @cnt=100
if (@cnt>75)
print 'inside the if statement'
print 'count is greater than 75'
else
print 'inside the else statement'
```

the above code will result an error

- [ ] e. Consider the following statements :

```
declare @tot int
select @tot=count(*) from student
```

executing the above statements will not display any output

if (@cnt>75)
print 'inside the if statement'
print 'count is greater than 75'
else
print 'inside the else statement'
```

the above code will result an error

- d. variables declared could be used in where clause only
- e. Consider the following statements :

```
declare @tot int
select @tot=count(*) from student
```

executing the above statements will not display any output

Which of the following statements are true ?

Select one or more:

- a. Consider the following T-SQL statements
  declare @cnt int
  set @cnt=100
  if (@cnt>75)
  print 'inside the if statement'
  print 'count is greater than 75'
  else
  print 'inside the else statement'
  the above code will result an error
- b. variables declared could be used in where clause only
- c. Consider the following statements :
  declare @tot int
  select @tot=count(*) from student
  executing the above statements will not display any output
- d. "declare @ID int,@sum int" is a valid T-SQL statement
- e. Consider the following T-SQL statements:
  declare @cnt int
  set @cnt=100
  if (@cnt>75)
  print 'inside the if statement'
  print 'count is greater than 75'
  The output for the above code is as follows :
  inside the if statement
  count is greater than 75

The default parameter type in stored procedures is

Select one:

- a. OUTPUT
- b. OUT
- c. INOUT
- d. IN
- e. There is no default type

In which of the following scenarios would a stored procedure be beneficial?

Select one or more:

- [x] a. An application running on a remote client needs to calculate and store an employee's salary which is obtained by multiplying the number of hours he has worked with the rate he is paid. Both the number of hours and rate are also stored in a table in the databse.
- [ ] b. An application running on a remote client needs to collect three input values, perform a calculation using the values provided, and store the input data, along with the results of the calculation in two different base tables
- [ ] c. An application running on a remote client needs to track every modification made to a table that contains sensitive data
- [ ] d. An application running on a remote client needs to ensure that every new employee that joins the company is assigned a unique, sequential employee number when his information is stored in the database.
- [ ] e. All of the given answers

Consider the following statements to create a view

```
Create view product_suppies (PID,Name,Supplier,TotalItems,TotPay)
as
select p.ProductID,p.ProductName,s.supplierName, Sum(sp.numItems), SUM(sp.numItems*sp.price)
from Product p, Supplier s, Supplies sp
where p.productID=sp.productID and sp.supplierID=s.supplierID
group by ProductID,ProductName,supplierName
```

Which of the following statements are true related to the above.

Select one or more:

- a. Renaming the columns in this view is not mandatory
- b. Any query written over Products, Suppliers or Supplies tables could be performed on this view
- c. This view is not updatable
- d. This view is helpful for stakeholders who only need to see information such as total pay and do not need to edit it.
- e. The query "select supplierName from product_suppies where TotalItems>100" will return the supplier Name of each suppli supplied more than a total of 100 items

Given the following statements:

```
CREATE TABLE tbl (col1 INTEGER, col2 CHAR(5));
CREATE TABLE tblAudit (user VARCHAR(20), date DATE, action VARCHAR(20));
CREATE TRIGGER trig_tblAudit ON tbl FOR INSERT AS
BEGIN
INSERT INTO tblAudit VALUES (CURRENT USER, CURRENT DATE,'Insert');
END
```

If user USER1 executes the following statements:

```
INSERT INTO tbl VALUES (1, 'abc');
INSERT INTO tbl (col1) VALUES (2);
UPDATE tbl SET col2 = 'Hacked' WHERE col1 = 1;
```

How many new records will be written to the database tables?

Select one:

- a. 4
- b. 3
- c. 5
- d. 0
- e. 2
